AETHERSPEND™ / DEPLOYMENT READINESS

Prepare a useful technical discussion.

Capture the actual landscape and delivery responsibilities before agreeing implementation scope.

Landscape

- SAP product, release and ABAP capability level.
- Fiori, OData V4 and RAP availability for the intended modern experience.
- Relevant purchasing data, organizations, currencies and a representative review scope.

Access and ownership

- Named development, Basis, security and purchasing owners.
- Display-authorization scope for document type, purchasing group, purchasing organization and plant.
- Agreement on creator-owned Watchlist access, note editing, retention and review responsibilities.

Your notes

SAP release / capability level: _____

Purchasing and technical owners: _____

Representative review scope: _____

DELIVERY & ACCEPTANCE

Define what completion will mean.

Delivery

- Approved package, namespace, transport and service-publication approach.
- Required SAP-native artifacts and target-system reconstruction steps.
- Launchpad configuration, roles and a support/handover arrangement.

Acceptance

- Representative GUI, service and Fiori result comparisons by currency.
- Restricted-user tests, stale-update checks and lifecycle checks.
- Realistic data volumes, performance measurements and a controlled target-system installation rehearsal.

Before committing to a rollout

The reference baseline is S/4HANA 2022 / ABAP 7.57. Compatibility with your release, SAP-native artifact delivery, restricted-user behavior, real data volumes and operational handover require their own assessment.
